PHILIPPINE ARMY MANUAL 8-0101

ARMY LEADERSHIP DEVELOPMENT SYSTEM

Proponent: Office of the Assistant Chief of Staff for Education and Training, G8, Philippine Army
Promulgated: 24 August 2022

PHILIPPINE ARMY MANUAL 8-0101

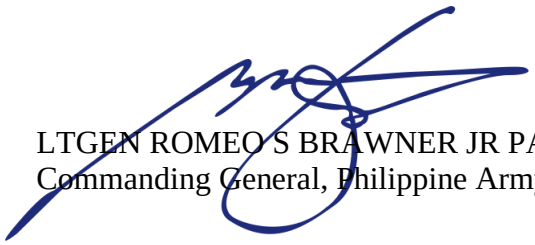

ARMY LEADERSHIP DEVELOPMENT SYSTEM

Proponent: Office of the Assistant Chief of Staff for Education and Training, G8, Philippine Army
Promulgated: 24 August 2022

PHILIPPINE ARMY MANUAL 8-0101

ARMY LEADERSHIP DEVELOPMENT SYSTEM

Philippine Army Manual 8-0101 (PAM 8-0101) is promulgated on 24 August 2022
by authority of the Commanding General, Philippine Army

LTGEN ROMEO S BRAWNER JR PA
Commanding General, Philippine Army

Preface

1. The Philippine Army Leadership Development Manual presents the fundamentals of leadership development of the Philippine Army necessary to achieve the goals of force readiness and versatility. The system is based on the leadership development strategy and likewise provides for leadership programs that the system manages.

2. The manual covers comprehensive description of army leadership development, its systems and leadership development stages. The manual also describes the core leadership programs and support necessary for the sustainment of leadership development PA wide. Further, the publication highlights the unique Filipino Military Leadership, how it is developed through sustainable programs and ultimately translates to the Philippine Army's organizational success.

3. The proponent of this manual is the Office of the Assistant Chief of Staff for Education and Training, G8, Philippine Army. The Doctrine and Capability Integration Center (P), Training and Doctrine Command, Philippine Army is responsible for the review and update of this publication. Comments and recommendations may be sent to the Commander, TRADOC, PA, Camp O'Donnell, Capas, Tarlac (Attn: Director, DACIC) or via email at dcannex45@gmail.com and via website at doctrinecenterpa.com. Feedbacks to this publication may also be conveyed telephonically via the Bonifacio Telephone Exchange trunk line number 845-9555 or military local line number 7650 extension 4971.

4. All publications that are inconsistent with this manual are hereby rescinded.

5. Unless this publication states otherwise, masculine nouns and pronouns do not refer exclusively to men.

Chapter I
Army Leadership Development in Context

0101. The continuous evolution of the regional and global security environment involves dealing with existential national security threats and challenges that the Armed Forces of the Philippines (AFP) confronts. Organizational breakthroughs in capabilities are being undertaken to make the organization adapt and be responsive to current and future scenarios, putting a premium on national interests, especially against evolving security threats.

0102. In ensuring that measures towards responsiveness are pursued and eventually sustained, the Philippine Army (PA) as a major service, recognizes the necessity of having a system to effectively develop PA leaders. Corollary to the changes in the organizational structure, leadership, as the lifeblood of the PA, guarantees that programs and its stages, support structure and mechanisms relative to such are appropriate, responsive and applicable.

0103. Leader development is elemental to the Army, especially in the face of striking a balance among its mandated functions to include warfighting and operations other than war. As such, leader development compose of training, education and experience need to be in consonance with each other (US Army, 2013).

0104. Leaders must be developed to understand the strategic environment, incorporating critical thinking and creativity in visualizing solutions. They must also ably describe and communicate crucial information with the goals of cultivating shared understanding, collaboration, building teams and achieving the willing obedience of followers in order to accomplish tasks and missions. Thus, leader development should be a "deliberate, continuous, and progressive process" founded in Army values (US Army, 2013). This process can achieved through the synthesizing training, education, and experiences acquired along one's career path and through planned occasions provided across the institutional, operational, and self-development levels, supported by peer and developmental relationships (US Army, 2013).

0105. The Army relies upon itself to develop leaders, thus the leader development underscores processes that will suit the organization's needs, built on the fundamentals of army leadership. As such, it is the Army organization's professional obligation to ensure that its leaders are of character competence, commitment, and courage in order to adapt to the complex and continuously evolving strategic and operational environment.

The Current Operational Environment

0106. Currently, the strategic and operational security environment is being confronted by not only internal destabilizing threats and non-state asymmetric threats but also with technologically advanced conventional threats. Terrorist sponsored insurgencies have merged their activities with technology, thus evolving to what is now termed as hybrid threats (PAMTCDOP, 2021).

0107. Current organizational analysis emphasizes that the situation in the West Philippine Sea has been unstable in recent years while internal assessments forecasts that internal security will generally be stronger in the next five years. However, terrorism will still continue to evolve in the following years with the emergence of cyberspace as the most recent frontier in warfare. Thus, defense capabilities enhancement is paramount and staying at par with new warfare concepts is an emergent need (PAMTCDOP, 2021).

0108. In view that security environment is ever changing and that this has largely affected the PA as security force, the volatility, uncertainty, complexity, and ambiguity (VUCA) are essential core activities to organizational performance. In coping with the challenges in the conditions that VUCA describes, the PA stretches its capabilities and aims to properly allocate scarce resources to maintain and improve organizational performance, putting premium in developing leaders that the Army needs (PAMTCDOP, 2021).

0109. The current and future security environment spells strategic and leadership changes necessary for the PA to adapt to, not only modernizing the Armed Forces as a whole, but also with being responsive to the changing security environment.

The Philippine Army Strategic Context

0110. The PA Strategic Management System framework mirrors the basic elements of a generic management construct centered at the Defense System of Management and supplemented by the Performance Governance System. Its sub-systems include strategic planning, capability development planning, organizational development planning, resource management, program execution and monitoring, and performance review and assessment. Generally, these elements entail sound leadership and emphasizes the need to develop appropriate leadership capabilities tantamount to the demands of pursuing the ends of these elements (PAMTCDOP, 2021).

0111. The PA Operating Concept requires the Command to provide well-led Army forces that could capably resolve, or support the resolution of external and internal security issues, asymmetric security threats, natural disasters, and other peripheral security crises. Thus, it also ensures that the mission of the PA remains aligned, nested, and relevant to the national security and interest of the state (PAMTCDOP, 2021).

0112. To accomplish the dictates of this operating concept, the Army will be employing its advanced capabilities in a geographically diverse land domain that has generally evolved. When various crises arise, this operating concept will make it possible for the Army to adapt and exceptionally execute a ground defense plan through robust leadership along the chain of command.

The Need for a Leadership Development System

0113. A leadership development system (LDS) is essential to produce leaders who are capable of managing organizational members towards expanding the collective capacity through successful accomplishment of leadership roles.

0114. Developing leaders encourages determination to excel in all individuals, especially for the Army as a fighting force and should thus be sustained. Leader development ensures that Army leaders grow into competent, committed, and professional leaders of character.

0115. The Army must have a leadership development system that will produce leaders who could ably adapt and effectively motivate followers despite imperfect information, and are decisive amidst any situation, including highly complex and dangerous events and environments (US Army, 2013).

Purpose of the Leadership Development System

0116. Leadership development is a conglomeration among the education or training institution, the unit or organization, and the individual – that the LDS will bring together.

0117. The leadership development system is aimed at developing leaders that support the mission and vision of the PA as well as the perspective that zeroes in on developing the individual relevant to the organization.

0118. Considering the external roles of an Army leader, the leadership development system also projects leadership development of individuals that add a premium on public leadership.

Chapter II
Features of Army Leadership Development

0201. The foundations of developing leaders compose of relation building and capacitating individuals to be of organizational and social significance. There are principles, standards, expertise, and manifestations that affect relationships and the ability of the leader and organization to influence other leaders and organizations, respectively.

Leadership Development Strategy

0202. The Army's leadership development strategy is anchored on the Be-Know-Do philosophy – that dictate the key characteristics of an Army leader in a summary of the leader attributes and core leader competencies. As the key strategy, the aforementioned philosophy sets the direction for leadership development, focusing on the end attributes and competencies to achieve leadership excellence. The Army scrutinize past paradigms and examine whether these are still relevant to the preparation of leaders for the operational and strategic challenges of the future (US Army, 2013).

0203. Cardinal to the leadership development strategy is that leaders at all levels understand their responsibility for continually developing other leaders. Leaders create conditions to maximize the development of subordinate leaders through teaching training them providing the required experiences for leadership growth. Leaders help other leaders realize that individual commitment to career-long learning is essential to development (US Army, 2013).

0204. In order to synchronize and fully implement the Army Leadership Development Strategy, commitment to the Army profession, lifelong learning, and development is imperative. Education, training, and experience as the primary components of leader development must merit balanced commitment especially in managing both military and civilian talents. It is likewise important to select and develop leaders with positive leader attributes and those who possess proficiency in core leadership competencies. The strategy intends to prepare them to adapt and create leadership opportunities guided by mission command principles in leader development. The strategy also offers a wide range of leader experiences and developmental opportunities (US Army, 2013).

0205. Implementation of this leadership strategy throughout the organization ensures that leader development is emphasized by providing sufficient and scheduled time for execution of activities relative to such. The performance of Army leaders today, as determined by how they are developed will meet the security challenges of tomorrow. Thus, the Army must ensure that leaders can understand the security environment as well as how all elements of national power come into play (US Army, 2013).

0206. The Army Leadership Development Strategy banks on the Ends-Ways-Means whose vision is to have professional and effective leaders to meet the present and future security challenges. The framework for such maintains that leadership development is

a responsibility mutually shared by the individual, institution and the organization (FM 22-100, 1999).

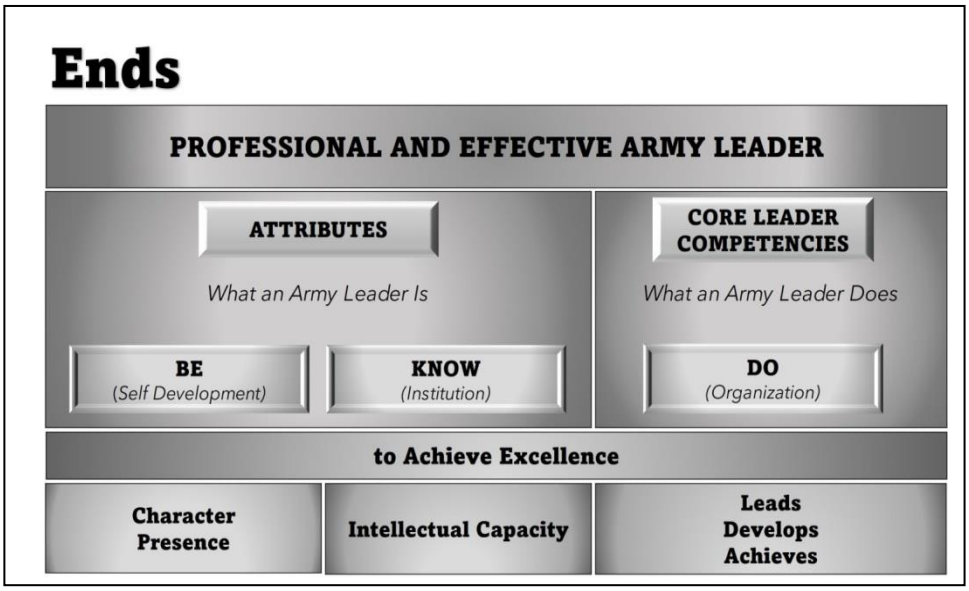

Figure 2.1 – The Ends of the Leadership Development Strategy

0207. In describing the ends of the strategy (Figure 2-1), the Army leader begins with what the leader must **Be** — that highlights personal values and attributes that shape character. The strategy includes processes that help the individual soldier define their qualities that will ultimately make up their leader identity. In gearing toward self-development, commitment to developing character is vital to a leadership position in the Army as this determines who the person is, what the person does and what is asked of others to do. By living the Army Values, subordinates are taught by example thereby helping develop leader attributes (FM 22-100, 1999).

0208. One ends of the leadership development strategy is providing skill mastery through intellectual capacity or what a leader **Knows**. Competence, particularly in basic soldier skills is of equal importance as good character is in an Army leader's growth. Without the basic competency, command will lack substance as mastering a standard is a requisite prior to asking subordinates to perform to standard (FM 22-100, 1999).

0209. How decisions are carried out, that is leadership in action, defines the **Do** principle in the Be-Know-Do Strategy. Leaders cannot be effective until they apply their knowledge and what they do directly influences their interaction with others on what has been done. As part of the strategy, soldiers, facilities, equipment, training, and resources are continuously improved to support and prove the command's commitment to excellence (FM 22-100, 1999).

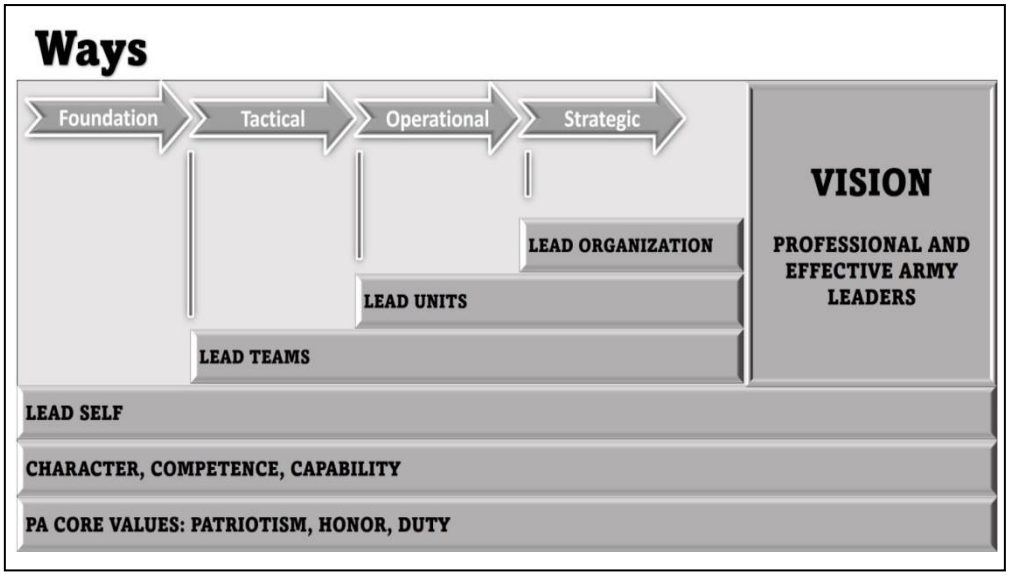

Figure 2.2 – The Ways of the Leadership Development Strategy

0210. The Ways of the Leadership Development Strategy (Figure 2-2) centers on the leaders' understanding of their responsibility for continually developing other leaders. Culling from Be-Know-Do is the focus of the Army Leadership Development System to develop leaders with character, competence and capability.

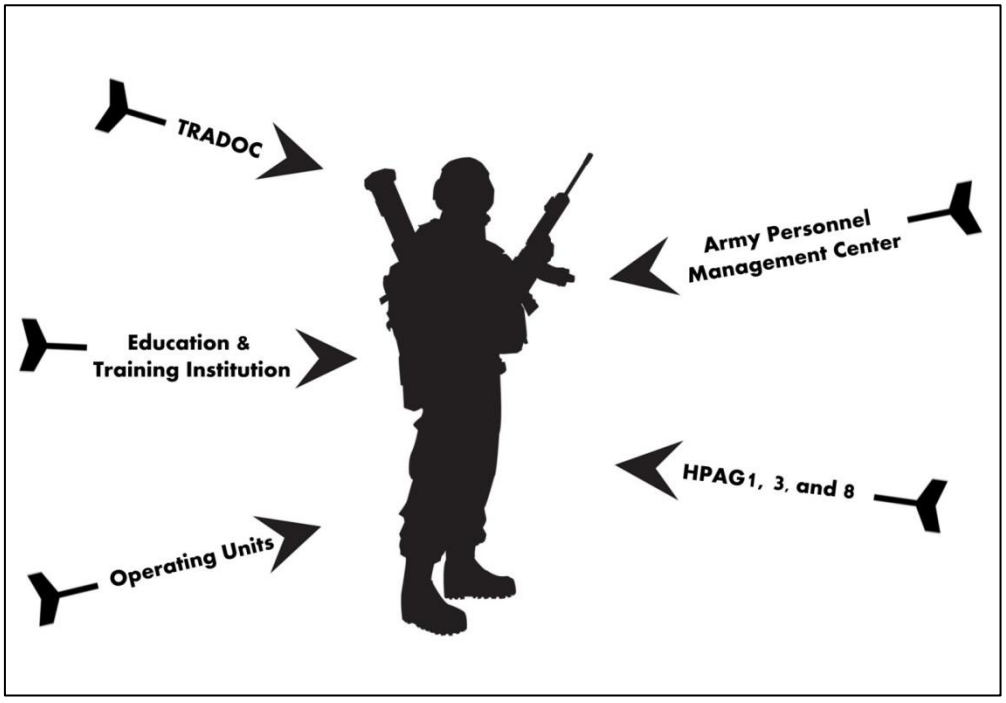

Figure 2.3 – The Means of the Leadership Development Strategy

0211. The means are the capabilities and resources one can bring to bear in the effort to attain the desired strategic ends. Means include will, time, people, and funding. The essential means for successful leader development are will and time. Thus, its main driver is the program that administers, manages, and integrates leader development initiatives. The means include implementation plans and supports the provision of detailed guidance by commanders, supervisors, and leaders.

Leader Development vs Leadership Development

0212. Leader development can be defined as developing the knowledge, skills, abilities, confidence, and behaviors of an individual leader to increase effectiveness. The focus of the process is often on developing the individual. On the other hand, leadership development focuses on building an environment where people in the organization develop leadership skills, abilities, behaviors, and attitudes individually and collectively along the chain of command (ADP 6-22, 2019).

0213. Considering scope, the goal of leader development is to expand the leader's ability to be effective in their roles and the processes they lead; while leadership development aims at the expansion of a group's capacity to have direction, alignment, and commitment.

0214. Leader development is but a part of leadership development in consideration of goals, objectives, outcomes, and results, as the first is driven by achieving personal goals and progressing as an individual. Leadership development, on the other hand, focuses on creating and expanding networked relationships and broader leadership capacity for teams and organizations. Leadership development aims at strengthening engagement and shaping culture and is driven by common goals that result to concerted outcomes and results (ADP 6-22, 2019).

0215. In contrasting assumptions and areas of concern, leader development sees that effective leadership happens by developing individuals and is thus concerned with developing the 'intra-personal' dimension of individuals. Leader development also assumes that in the event that a leader's development and/or psychological stability increases, the better leaders they are more likely to be. Meanwhile, leadership development espouses that leadership is a relationship that focuses on inter-personal interactions and relative required skills are to be enhanced to build and maintain such type of relationships. As result, leadership development highlights the significance of the principle of reciprocity, where promises or commitments individuals have with each other are founded on mutual trust and respect (ADP 6-22, 2019).

0216. Leader development typically assesses competencies, individual/adult development using assessment. Inclusive to these assessments are personality tests or other types of psychometric tools for assessments, the 360° feedback assessment and individual coaching. Leadership development, on the other hand, uses group work, group simulations through games, coaching for teams, development centers as measurement tools. Groups conference, small group instructions and learning, sociodrama and sociometry; action research and cultural and experiential, action learning are main modes of leadership development (ADP 6-22, 2019).

0217. Leader and leadership development must not be substituted to mean the same thing. Despite these differences, leadership as a concept, complement leader development, where leadership development is built on the tenets of leader development.

Leadership Development Concept

0218. In view that leadership development centers on building networked relationships, hereby considered as social capital, among individuals in an organization, the concept encompasses developing the individual who serves a social resource function are rooted in relationships.

0219. Filipino military leadership development can be traced to how Filipinos fought for identity (pagkakakilanlan) and respect (respeto) that transcended to their fight for independence (kasarinlan) and freedom (kalayaan). Eventually, leaders evolved to continue the struggle for internal consolidation (pagkakaisa), solidarity (pagkamatatag), and peace (kapayapaan). Ultimately, to cope with the emerging threats, the Filipino leader's development will be about honor (dangal), patriotism (pagkamakabayan), and duty (katungkulan) (AFPLDC, 2021).

0220. Developing Filipino leadership encompasses culture, history and the unforgettable experiences along the way, and the challenges of current realities. Driving factors that contribute to Filipino leadership include the family, driven by the mission and vision (AFPLDC, 2021).

0221. Historically, leadership development has long concentrated on the individual skills or competencies development, whereas this leadership development concept emphasizes a range of individual, relational, and collective outputs.

0222. Developing a leader without due consideration and examination of how individuals interact within the social context is parallel to disregarding the reality that leadership is embodied in a complex interaction. This interaction must exist between individuals and their social and organizational environments.

Leadership Requirements Model

0223. Translating the be, know, and do in the Filipino leadership context distinguishes the Philippine Army leader as one who recognizes that profession of arms as a unique and special vocation (AFPLDC, 2021). To accomplish the mandate of the Army organization requires impeccable character, professional competence, and flexible capacity.

0224. The leadership requirements model shows how the emphasis on character, competence and capacity relate and integrates with the foundations of leadership to produce effective leadership. In this respect, all components can properly be understood in context of the other.

0225. As has been established, leadership involves more than influencing others to act appropriately. Embracing a leadership role involves developing one's character, competence, and actions. Leading well involves adopting the Army Values, learning soldier skills, and practicing leadership actions. Figure 2.4 provides for the character components and core leader competency levels and capacity attributes that the system endeavours to develop and sustain.

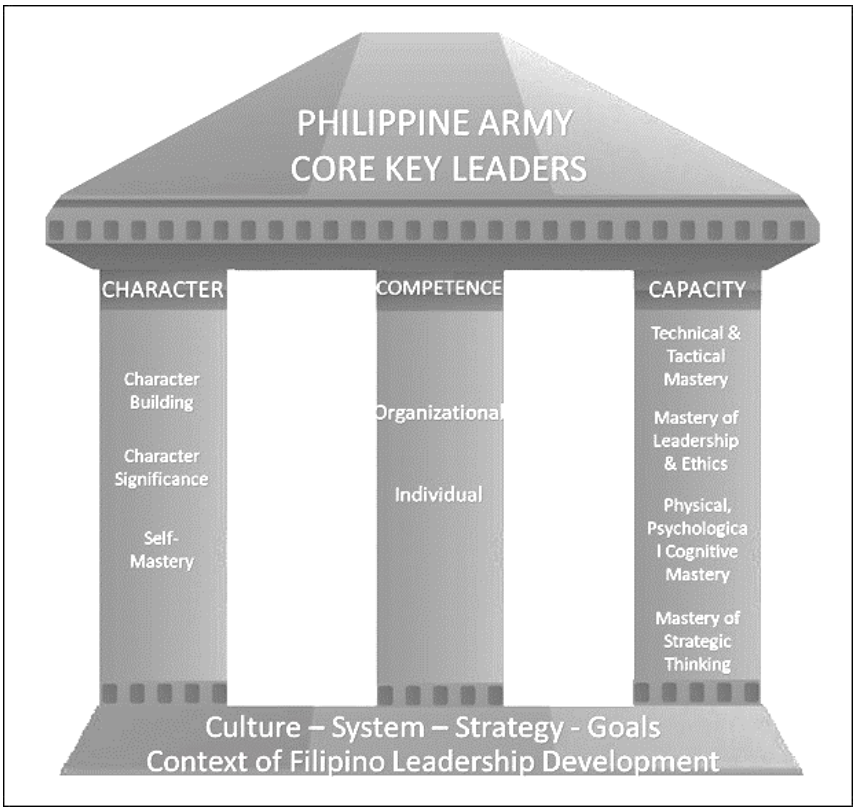

Figure 2.4 – The Leadership Requirements Model

Character

0226. Commitment to character as applied in leadership involves embracing and living out Army values and exhibiting leader attributes. Character is founded on these values as an Army soldier that sets the direction for. By manifesting the Army Values on a daily basis, leaders indirectly impart the significance of developing leader attributes to their subordinates and likewise help them build such (University of Akron, 2014).

0227. Successful leaders must possess appropriate qualities and values manifested in their principles and standards. These values are primordial in helping people discern between right or wrong in any situation. The Philippine Army is guided by three basic principles – Honor, Patriotism and Duty.

0228. Apart from the fundamental values, character also includes empathy which is defined as the propensity to experience something from another person's point of view. This trait helps leaders relate to and access another person's feelings and emotions (WGU, 2019), with the desire to care for and take care of soldiers and others.

0229. The warrior ethos, as part of a leader's character, characterizes the spirit of the profession of arms that should be an internal shared sentiment among soldiers. It takes sound leadership to be able to put the warrior ethos into context such that leaders will be able to develop and maintain the professional attitudes and beliefs that reflect the country's enduring values that the profession has sworn to protect. The warrior ethos context that a leader must develop should be in the context of a soldier's commitment to victory in peace and war through his willingness and desire to serve the nation.

Leadership involves having the ability to develop in individual soldiers, absolute faith in themselves as well as in their team because of the common beliefs and values that bond them (FM 6-22, 2015).

0230. In the context of the PA Filipino Leadership development, character is considered the most critical component. Character (pagkatao) includes personal moral virtues (kabanalan) unique to the leader as it is his true self. The leader's character encompasses his sense of purpose (ipinaglalaban), values, principles (prinsipyo), and conscience (konsensya) manifested in his behaviour (katangian), attitude (ugali), demeanor (asal), and self-mastery (AFPLDC, 2021).

0231. Building the character required by the military service is highly emphasized in the individual soldier through pre-entry courses and is formed through various education, training and opportunities. Character occurs in a continuous, reinforcing, and iterative process and can be achieved on a daily basis through actual field experience, coaching, mentoring, counselling, reflection and regular formal, and informal feedback. While it is the individual's responsibility to attain a high level of self-mastery, the unit or organization sets the necessary policy support and institutional level programs to hone and shape the leader's journey as he enters, serves and retires from the service (AFPLDC, 2021).

0232. Character as a leadership quality demonstrates one's decisions (isip), spoken words (salita) and actions (gawa) to others, thus forging trust (tiwala) and cohesion (pagkakabuo) within the group and encouraging team character. This is the reason that character is given the highest premium to the organization as the backbone of leadership development systems and programs (AFPLDC, 2021).

0233. Self-mastery is knowing oneself as a person and improving one's character and competence in order to become a more effective leader. Knowing oneself therefore involves acknowledging one's strengths in character and controlling one's weaknesses. The process of self-mastery is the most effective to do this as it is essential to have good character to pursue the profession of arms with integrity and honesty (AFPLDC, 2021).

Competence

0234. Competence pertains to a leader's training, experience and attitude that will contribute to superior performance in achieving organizational objectives and goals. To improve competence, it is important to take advantage of chances and opportunities to learn through formal and informal trainings. A leader must have developed the right values, attributes, and skills to be able to bring together all aspects of a person including their beliefs, emotions, behaviour, opinion and actions. These traits allow the leader to provide purpose, direction, and motivation to ultimately influence the people to operate towards mission accomplishment and improve the organization (FM 6-22, 2015).

0235. Competencies of an army leader involve their ability to influence, operate and improve. More specifically, the ability to influence includes good communication skills, sound decision-making and, effective ways of motivating others towards mission accomplishment. Further, a leader who is a competent operator knows how prepare and execute detailed plans that has careful examination of its feasibility, acceptability, and

suitability. These plans must be in accordance with mission standards, while taking care of people and efficiently managing resources (FM 6-22,2015).

0236. A part of a leader's competency is to be able to determine what needs to be done within a given period of time through proper assessment of performance in order to strengthen identified areas and improve weak ones. They are able to focus their organizations' efforts on both short-term and long-term goals through setting priorities and balancing competing demands. They continuously seek to develop themselves, as well as subordinate leaders, through mentoring, envisioning, adapting and leading change. They strive to spend time and find resources to improve teams, groups, and units and to foster an ethical climate (FM 6-22, 2015).

0237. Organizational competency relies on the Army's peculiar capabilities, functional specialties and skill sets that enable the Command to fulfil its mission. Organizational competencies are considered core competencies that are believed to have the greatest strategic value. In view of skills, knowledge and attitudes/attributes necessary for broad job functions. Functional competencies are specific knowledge and skills that relates to successful performance of a job description or functional position (AFPLDC, 2021)

0238. Individual competency is manifested in a leader's clear and consistent way of delivering their expectations and knowing what they want to do to succeed with their leadership responsibilities. As such, these competencies are observed through behaviors that can be readily observed and assessed through a 360° evaluation. These individual leadership competencies emerge from balanced combination of institutional schooling, reality-based training, self-development and professional experience. Individual leadership skills and capabilities are considered strategic in nature when they are pursued for higher goals such as articulating a unit's vision, influencing unit culture, critical resource generation, policy-level actions and building consensus. Strategic leadership competencies are taught both formal and developmental assignments and through everyday field experiences in and out of the organization.

Capacity

0239. A leader's capacity refers to all aspects needed to lead and enhance their leadership skills, core competencies and character. Capacity is extremely important to have effective and competent attributes.

0240. Professional mastery is superior performance of the required competencies, performance appreciation, flexibility of performance across a range of circumstances and the self-confidence to apply them in conditions involving risks. This involves understanding individual and collective performance and how these work together in the environment that the leader creates and how these are vital in the development of warfighting capabilities.

0241. A leader with intellectual capacity requires him to have mental resources or tendencies necessary in forming a leader's conceptual abilities and impact effectiveness. His mental flexibility must be displayed in his ability to anticipate or adapt to uncertain or changing situations. Leaders must be able to think through second-and-third-order effects when current decisions or actions are not producing the

desired effects. He must be able to innovate and improvise and quickly apply multiple perspectives and approaches to assessment, conceptualization, evaluation and problem solving (FM 6-22, 2015).

0242. A leader's judgement must be a product of his shrewd assessment of situations or circumstances where he must draw sound conclusions from. In the process, he develops the ability to form well-supported opinions and make discernible decisions and calculable guesses as well as to introduce new ideas when the opportunity exists or in the face of challenging circumstances. In essence, leaders must also have the ability to establish solid assumptions and timely decide even when all facts are not yet available (FM 6-22, 2016).

0243. Technical and tactical mastery links knowledge and skills and ensuring that accomplishment of functions is executed flawlessly, especially in terms of the basics of the profession. This demands understanding and appreciation of institutional doctrines which should not be used blindly (AFPLDC, 2021).

0244. Mastery of strategic thinking develops professionals with a deep understanding of war, core interest and elements of national power, founded at the beginning of one's military career. Leaders as strategic thinkers appreciate critical and creative thinking and are more likely to provide avenues for innovation. The capacity of strategic thinking is significant as it allows for authority and competence to correct tactical and operational blunders. While it is not with the strictest intent to make strategists out of junior officers, even the most junior leaders in the future will depend on better strategic awareness and understanding to guide their tactical activities (AFPLDC, 2021)

0245. A leader practices interpersonal tact through understanding and finding meaning in his interactions, and using these observations effectively. He must also be conscious of character and motives and how these affect the interactions. As such, he must not only possess technical and tactical knowledge but must have sensitivities as regards to understanding the difference.

0246. A leader's presence is usually based on his outward appearance, demeanor, actions, and words and is most likely communicated through his military bearing, being physically fit, and being composed, confident, and resilient. As presence is largely a physical aspect of leadership, a leader must ensure that he possesses a commanding presence, thus projecting a professional image of authority. He must advocate and exhibit sound health, strength, and endurance that also consider emotional health and conceptual ability under prolonged stress. Presence also requires demonstrating composure, especially in handling emotions and exuding self-confidence appropriate to various settings he is placed in. A leader must be confident in his unit's capabilities, believing that it can succeed whatever it does. He must also practice and cascade resiliency, quickly recovering from setbacks, shock, injuries, adversity, and stress while maintaining a mission and organizational focus (FM 6-22, 2015).

0247. All Army leaders are followers and precursor to leading others is also extending influence beyond the chain of command. They should be able to build trust, lead by example and communicate effectively while exhibiting good followership qualities. In this modelling behaviour, character, presence, and intellect while leading others are observed. Leaders inspire and guide subordinates to follow as subordinates are

encouraged to react and follow guidance while performing their duties. In establishing a proper level of rapport, leaders inspire followers to act in good conscience and follow guidance. Whether serving in the role of leader or subordinate, all are honor bound to perform their duties to the best of their abilities (FM 6-22, 2015).

0248. Effective leadership relies on making the purpose, direction and motivation of leaders and subordinates aligned. Developing unity of purpose, effort and consistency emanates from working with a shared understanding of the operational picture and higher intent. Subordinates who see consistency will sense shared purpose and be less prone to distraction by confusing or conflicting guidance from different leaders. Consequently, decisions and activities that are aligned with those involved leader can generate a greater influence. Communicating as a leader means that one listens actively, creates shared understanding, employs engaging communication techniques, and is sensitive to cultural factors in communication (Kruse, 2020).

0249. Leading is a unifying aspect of leadership that ensures attitudes and actions up, down, and across units are aligned around a common vision. Delegating authority and control deemed appropriate for the situation enables mission command. Sound leading draws on various sources of expertise that can ultimately inspire and cultivate mutually beneficial relationships with others inside and outside the organization. Leading involves displaying character, exemplifying the warrior ethos and leading with confidence in adverse situations. Leaders must also endeavour to demonstrate technical and tactical competence, understanding the importance of conceptual skills and modelling these to others, and seeking diverse ideas and points of view (ADP 6-22, 2019).

0250. To ensure that the quality of leaders and future leaders flourish as their responsibilities change in the assumption of new leadership positions, the individual soldier has the responsibility to develop themselves and their subordinates. As such, a leader continually encourages improvement in leading and other areas of leader responsibility, creates a positive environment and inspires an organization's climate and culture. They also aim to develop others to assume greater responsibility or achieve higher expertise, and be stewards the profession. In this light, they help maintain professional standards and effective capabilities for the future (University of Akron, 2014).

0251. In enhancing leadership proficiency, leaders conduct thorough study, gain feedback, and practice their functions. Learning to be a leader requires knowledge of leadership, application of knowledge, and feedback from one's seniors, peers, and subordinates. It also requires opportunities to practice leading others as often as possible. Developing leadership requires individuals to have a desire to improve and invest effort, development for support from seniors, and the values learning within the organizational climate. Thus, the individual must embrace the opportunity and internalize the information apart from various forms of evaluation provided them (University of Akron, 2014).

0252. Developing others to lead begins from recruitment, development and retention of leaders with potential for higher levels of responsibility. Leaders develop subordinates when they prepare and then challenge them with greater responsibility, authority, and accountability. Leaders have the individual professional responsibility to

develop their subordinates as leaders (Day, 2007). Successful leader development is based on five tenets (FM 6-22, 2015):

a. Organizational, superiors, and individuals commitment to leader development

b. Clear purpose for developing leadership

c. Supportive relationships and culture of learning

d. Mutually supportive institutional, operational, and self-development domains that enable education, training, and experience

e. Providing, accepting, and acting on assessment and feedback results

0253. Leaders identify and prepare subordinates with potential to assume positions with greater leadership responsibility, who in turn prepare themselves accordingly for future leadership assignments. Leaders choose subordinates who are best prepared for increased responsibility and those who are most likely to select for higher leadership positions. In these, Army leaders set priorities and weigh demands in order to balance individual and unit goals over various timeframes. They guide the organizations' efforts to meet both short- and long-term goals, while continuing to meet immediate requirements (CAPL, n.d.).

0254. A leader's primary aim is mission accomplishment by building and guiding his unit or organization. Leaders largely consider how to build and maintain effective organizations critical in accomplishing current and future missions. An effective Army organization built to serve a larger purpose of mission accomplishment is of utmost priority, especially in combat where risk of destruction is possible (Kolzow, 2014).

0255. A leader who achieves gets results and relates to actions of leading to accomplish tasks and missions on time and to standard. Getting results requires the right integration of tasks, roles, resources, and priorities. This action also focuses tasks, priorities, people, and other resources to achieve the desired outcomes. Leaders are ready to take action all the time to achieve outcomes and make necessary adjustments for success. Leaders also work to sustain or improve the organization's performance by assessing and giving feedback as they execute and make adjustments (ADP 6-22, 2019; Kolzow, 2014).

0256. Being a leader who achieves implies that he can provide direction, guidance, and priorities, and conducts assessments, adjusts accordingly, while continuing the mission. This further implies that a leader knows how to prioritize, coordinate tasks for teams including efficient management and allocation of resources. A leader gets things done means that a leader designates, clarifies and de-conflicts roles to be able to appropriately recognize work performance. As necessary, a leader deems feedback as an essential part of not only work processes but of achieving the best for the organization (University of Akron, 2014).

Leadership Development Domains

0257. Leadership development and practice have traditionally focused on the analytical realm of leadership. However, the contemporary issues surrounding societal confidence, coupled with the evolving demands, needs, and expectations of employees, point to the potential need for a more holistic approach to leadership. Thus, leadership development programs have to develop holistic leaders that are adept at operating in the analytical, conceptual, emotional, and spiritual domains of leadership practice. The integrated model for holistic leadership development and practice that addresses all four of these domains is grounded in both established and emerging leadership development capabilities (Quatro et.al., 2007).

The ACES Model of Holistic Leadership

0258. This holistic leadership development model proposes that leadership development programs and initiatives must cover a holistic scope, specifically addressing the analytical, conceptual, emotional, and spiritual (ACES) domains of leadership practice and development. A holistic leader ensures scarce resources still meet the security and operational requirements of a unit and specific situations (Quatro et.al., 2007).

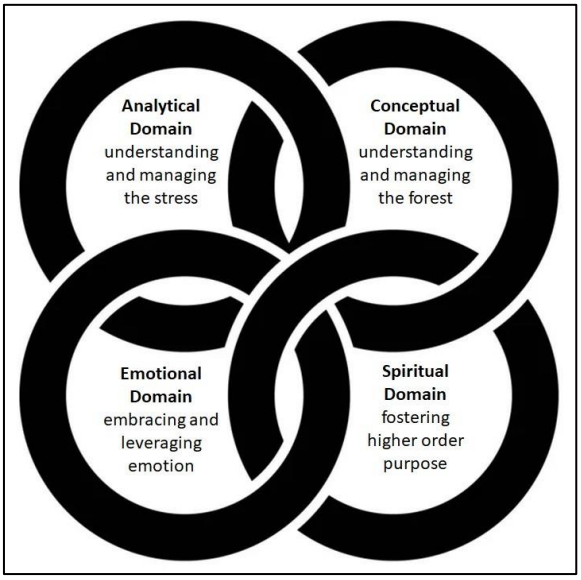

Figure 2.5 – ACES Model of Holistic Leadership (Quatro et.al., 2007)

0259. The ACES model shows conjoining of the four domains that truly represents holistic leadership. On the other hand, for the model to be fully maximized, leaders must have the ability to recognize the interdependence of each of the four domains, and demonstrate leadership practices reflective of such. The most effective leaders deliberately strive to assimilate all four domains into a truly holistic approach (Best, 2011).

a. The analytical domain means that leaders must be developed to have a masterful understanding and management of complexity, especially in handling individual differences. Theoretically attributed to the path-goal model of

leadership, an analytic leader clarifies follower roles and objectives by effective planning and organizing their work. Further, by constantly monitoring work progress, leaders are able to clarify inadequacies that might prevent followers from achieving set organizational and personal goals. The analytic domain obviously stresses cognitive abilities and skills of leaders.

b. The conceptual domain emphasizes development of leaders who are adept at both understanding and managing interrelated complexity and fostering creativity. Further, this domain also reflects cognitive abilities and skills, but at a more systems level of analysis. The conceptual capacity of a leader allows leaders to form forecasts using their own judgment processes notwithstanding values, boundaries, beliefs, or points of view of others. Conceptual capacity also allows leaders to demonstrate intellectual stimulation to help followers identify the core problems of situations. The intellectually stimulating leader will use conceptual capacity to provide a broader view of the environment upon which a wide variety of organizational stakeholders may be served. Leaders with strong conceptual skills understand and manage the environment within each individual soldier grows.

c. The emotional domain focuses at developing leaders who are attuned to emotional issues. This domain of holistic leadership considers the emergence of leadership visions is rightfully cascaded and shared with followers. Highly attuned emotional leaders are skilled at understanding and managing human emotion as an inevitable phenomenon in a various settings, and leveraging it as a source of energy and shaping influence on follower behavior. Effective leaders always consider own and others' emotional needs in order to achieve effectiveness. That is, they are able to maintain their emotional intelligence.

d. The spiritual domain refers to developing enlightened leaders who recognize the value of connectivity and how followers relate to higher-order purposes thus enabling association of individual tasks and its role in the entire mission.

0260. Given these definitions of the four ACES domains, their different yet interdependent relationship can be viewed as critical to leadership effectiveness. Holistic leaders strive to ensure that analytic and conceptual statements still consider subordinates' emotional and even spiritual aspects, either explicitly or implicitly.

Leadership Development Stages

0261. Leadership development begins the moment that an individual enters the Army. In the previous chapter, the specific education, training and experiences are provided to guide the Army leader as to how the Army intends to develop his leadership acumen as he progresses in his career. As the Army leader assumes responsibilities, there are stages he undergoes to be able to acquire the skills and aptitude to be ready for the next higher tasks. Similarly, along with the expansion and broadening of roles are challenges that he must be prepared to meet.

Stages of Leadership Development

0262. Developing leaders involves correct environments and a considerable amount of time to manifest. Individuals develop certain types of intellect that would help them manoeuvre their way to effectively handle their assigned unit. Figure 4.1 depicts these types of intelligence types that a leader discovers across his years of service. In his progress, there are certain factors that are measured through various means and mindsets developed accordingly. It is important to note that these stages follow this sequence and that a leader can only move to an advanced stage after first mastering its predecessor. This is because, while distinct, each stage does not replace its predecessor, but builds upon it (Humphreys, 2017).

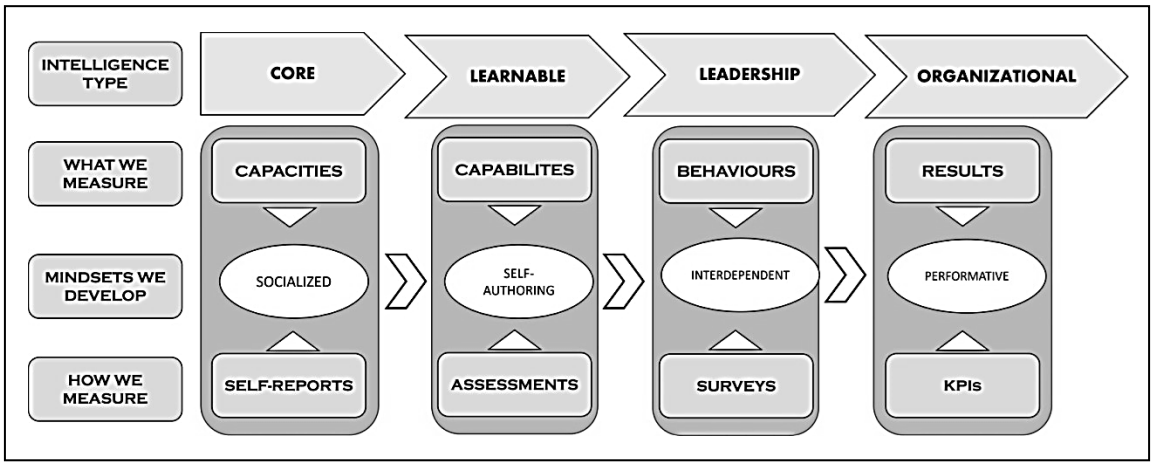

Figure 2.6 – Stages of Leadership Development (Humphrey, 2015)

0263. The first stage, which begins as soon as the soldier takes oath, is focused on the development of Core Intelligence that involves comprehension of individual differences through awareness of one's natural capacities. These capacities are measured through self-reports and feedback on one's personality, strengths, and values assessments. With these assessments, the leader understands and eventually manages the differing personality types, strengths profile or values orientation he encounters. Developing Core Intelligence enables potential leaders focus on significant factors that will contribute to being more effective members of a team (Humphreys, 2017).

0264. The second stage, beginning from when a leader first takes responsibility in managing people, is focused on the development of Learnable Intelligence. This type of intelligence considers the assimilation of new and astute aspects of experience through reflection. Abilities relative to this intelligence are measured using intelligence assessment tools and tests, intended for only for developmental purposes. The result of developing Learnable Intelligence is the ability to skillfully manage oneself and optimally motivate others (Humphreys, 2017).

0265. The third stage begins when a leader first occupies a role in key decision-making. This stage is focused on Leadership Intelligence or the understanding of key competencies required for effective leadership. Behaviors manifested in this stage are measured using surveys that serve as personal benchmarks that may come in the form of 360° assessments that contextualize subjective insights within established norms.

The result of developing Leadership Intelligence is the ability to build alignment within and across teams, and to manage increasing degrees of complexity (Humphreys, 2017).

0266. The fourth stage, which begins when a leader holds an executive role for the first time, is focused on the development of Organizational Intelligence. This type of intelligence involves understanding of organizational priorities and their corresponding rationale. Success is measured using strategic, meaningful and defensible key performance indicators found within the larger cultural context. The result of developing Organizational Intelligence is the ability to capitalize on multiple, competing perspectives, set direction and lead change (Humphreys, 2017).

Challenges in Leadership Development

0267. In view that there are capacities, capabilities and behaviors that must be measured in this leadership progression, and that mastery is a must, a leader also undergoes different phases in his leadership journey where he encounters challenges (Figure 2.6)

0268. As an **emerging leader**, the individual transitions from being a mere contributor to being a leader where he takes on bigger roles and responsibilities and begins to present and manage meetings and conferences. This necessitates building on networks apart from the usual daily grind. Having overcome these challenges, he is now a **developing leader** who must discover the effects of power and influence and realizes that he, possessing both, must lead by example. As a **strategic leader,** the individual will now face the challenge of obtaining and sustaining results as he will mostly likely have inadequate feedback given his scope of leadership. Given the enormous tasks and responsibilities, he may experience isolation and dilemma on his work life balance.

Figure 2.7 – Leadership Challenges

0269. In the context of Filipino military leadership, Army leaders need to hone their effectiveness by developing skills. They are expected to inspire others, and develop more future leaders through mentoring and coaching. Challenges of team building, team development, and team management are present. Specific leadership problems include how to instill pride, how to provide support, how to lead a big team, and what

to do when taking over a new team. Knowing these leadership challenges are common experiences for Filipino Military Leaders is helpful, both to the leaders and to those charged with their development (AFPLDC, 2021)

0270. Ethical reasoning poses a challenge for a leader as he must consider ethics in planning, preparing, executing and assessing operations where they may be choices between right or wrong, shades of gray or two rights. Some problems center on an issue requiring special consideration of what is most ethical and leaders must use multiple perspectives to think about ethical concerns to determine the most ethical choice (AFPLDC, 2021)

0271. Ethical orders involving making the right choice and acting on it when faced with an ethical question can be difficult. Situations in which a leader thinks an unlawful or illegal order has been issued can be the most difficult and can test character. In the case of unlawful orders, a leader has a duty to question such orders and refuse to obey them if clarifications of the order's intent fail to resolve his objections. If a subordinate perceives an order to be unlawful, intensive efforts to fully understand the details of the order and its original intent must be made (AFPLDC, 2021).

0272. One of the challenges of the Filipino military leader is education and learning as it is perceived as the most neglected aspect of leadership. Competencies develop through capacity building, formal training, mentoring and coaching as well as formal studies is important for military leaders to thrive. There must be developments for those involved in training and education should be equipped, trained and capacitated to respond to requirements. The challenge therefore to respond and draw attention to requiring military leaders to attend programs to develop such (AFPLDC, 2021).

Chapter III
Fundamentals of the Leadership Development System

0301. The word system is derived from the Greek word "systema" which means the organized relationship among the functioning units. As such this section will describe the features of the PA Leadership Development system to include its framework, principles, environments and methods.

0302. The most basic elements of the leadership development system are the interrelated, identifiable and moving basic components that must interact among themselves. It is not only a collection or grouping of elements. The motion and interaction of the components make the system dynamic and such a relationship defines the boundary between the system and environment.

0303. The leadership development system is a set of elements forming an activity or scheme seeking the common goal of developing leaders across an individual soldier's career by using data, referent on time, to gain information.

Leadership Development System Framework

0304. The Leadership Development System Framework is anchored on the leader development framework of the Philippine Army where formal education, professional experience and self-development encompass traits that hone leaders for their responsibilities. Thus, this framework applies to all the stages of an individual soldier's career and his ability to hold a leadership position where he will be expected to solve problems, interpret and interact with their environment. Thus, the framework describes the ability to examine both the internal and external factors that will affect the discharge of his functions as a leader.

0305. The Leadership Development System Framework provides a way of understanding how a leader is likely to interpret situations and thus how they may act in leading themselves, others and the organization. Further, it provides an opportunity for deeper personal understanding and identifies unique developmental challenges. The system, however, does not prescribe an absolute label that describes a person nor does it purport to predict behavior in particular situations. The framework does give some very dependable pointers regarding qualities and types of leadership capability an individual may possess (Day, 2007).

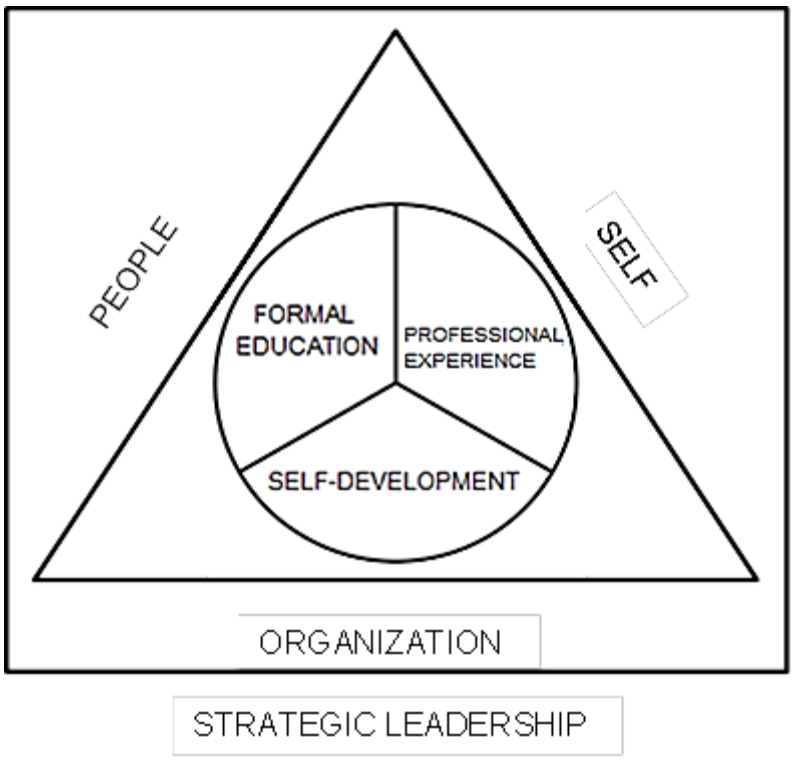

Figure 3.1 – Leadership Development System Framework

0306. The system also considers the levels of leadership where each Army soldier operates. Thus, the framework emphasizes that every leader, regardless of the level he is leading at, will have to know and lead himself. Similarly, every leader always leads others in a defined context. As the leader steps up, he begins to influence the organization in greater levels of uncertainty and complexity. Ultimately, strategic leaders work in uncertain environments facing highly complex problems that extend beyond the Army. In view of this, the system accounts for how the leader will conduct himself and exercise leadership throughout his service.

Leadership Development Design Principles

0307. The Army regards principles that will guide policy and actions in order to develop leaders with the required qualities and enduring leader characteristics. These guiding principles remain unchanging from recruitment to retirement, thus engendering a leader development continuum that is "deliberate, continuous, and progressive" (FM 6-22, 2015). These principles drive the synchronization and implementation of the Army Leader Development System.

a. Commitment to the Army Profession, individual and organizational development, lifelong individual and professional learning.

b. Balance the Army's efforts to the components of leader development.

c. Manage military and civilian human resource to benefit both the institution and the individual.

d. Select and develop leaders with desired attributes and leadership proficiency appropriate for higher responsibilities.

e. Prepare adaptive and creative leaders capable of operating and solving problems within the complexity of the operational environment and the entire range of military operations.

f. Embed Mission Command principles in leader development.

g. Value a broad range of leader experiences and developmental opportunities (FM 6-22, 2015).

0308. The leadership development system is designed with recognition of the three components: training, education and experience. Each of these components adequately support leadership efforts of the three domains of education and training (operational, institutional, and self-development).

0309. In leadership development, the domain includes supporting organizations, centers and schools that provide initial training and subsequent functional training and professional education. This also covers advanced civil schooling, training with industry, and fellowships to supplement leader education. In terms of providing formal education, the institution prepares its leaders by providing them with competencies for the current and future responsibilities required of their rank (US Army, 2013).

0310. Considering the need to enrich leadership with professional experience, the operational domain is for leaders to develop technical competence, advanced leadership abilities and learn to contribute to the development and implementation of national and geo-political strategy. This domain encompasses leadership acumen developed through execution of planning, preparing, executing, and assessing unified land operations as well as reviews, coaching, counseling, sharing and mentoring.

0311. The self-development domain is where leaders develop their leadership skills through their in-depth self-knowledge that in turn bridges the learning gaps between the operational and institutional domains. This can be accomplished through structured, guided or personal self-development.

0312. Designing leadership development recognizes that training and education work in hand in hand to build leaders that the Army needs. Education provides the knowledge while training increases the ability of leaders to perform in situations that call for performance of such.

0313. The system design provides for all leadership development initiatives to have clear objectives and corresponding performance measurement tasks:

a. Clarity of objectives and performance measurement. Objectives for the leadership development systems and programs must have specific, measurable, attainable and realistic objectives and should have corresponding evaluation tools or performance rubrics, either qualitative, quantitative or a combination of both.

b. Combine theory with practical information and apply them. Leader competencies compose of knowledge derived from theories learned through education and application venues provided by training.

c. Analyze leader and organizational needs. The leadership development system and its programs take into account the individual predicaments of leaders and how these would be developed to fit organizational needs

d. Delivery encompasses general and specific components of the organization. The leadership development system is designed to address the tactical, operational and organizational levels and ensures that leadership across all levels are molded to fulfil the demands of their leadership roles.

Leadership Development Environments

0314. Leadership development environment both refer to external and internal environments that affect a leader's performance of his tasks. The external environment includes the socioeconomic, educational, legal–political, and cultural aspects and all other factors that is usually present in a specific geographic area (Wong, et al., 2003). In addition, aspects in which the soldier identifies himself is also considered as leadership development environment such as his family, church and school among others. These have specific effects on a leader's personality that may accelerate or retard the development of inherited mental capacity (Military leadership, 1998).

0315. Part of a leader's environment is dealings with staff and subordinates where the direct application of the traits and principles of leadership occur. It is through these subordinates that the influence of the higher command to the leadership environment become apparent and thus encourages other leaders to develop and practice the traits and principles of leadership within their respective areas of influence (Military leadership, 1998).

0316. Higher commander's policies also form part of a leader's leadership development environment as it affects the efficiency and cooperative attitude of a larger command. The leader must ensure that the commander's policies, which are aligned with the mission of the unit, are duly followed. Such contributory actions must be coherent and clear or explainable, must be widely communicated, and thoroughly understood by those who are expected to comply. The practice that the leader allows his subordinates to develop the procedures and techniques to implement his policies must be normalized. This then assures the leader that policies are well-comprehended and implemented at the lower levels through monitoring and evaluation routines (Military leadership, 1998).

0317. As leadership development environment considers the internal factors such as a leader's leadership style, personality and preferences, the leader must be able to utilize these internal facilities as the situation demands. A leader who knows the effects of organization on leadership dictates his ability to delegate and decentralize intelligently and effectively. These skills are essential in applying the principles of leadership. Developing a sense of responsibility among subordinates entail effective delegation and employment in accordance with capabilities and in response to the environment (Military leadership, 1998).

The Command and Ethical Climate

0318. The organizational climate refers to how members feel about the organization that emanates from their shared perceptions and attitudes about the unit's daily functioning, policies and practices. Various factors make up a unit's climate that ultimately determines the unit's effectiveness. These characteristics include: empowered and coherent with a clear vision; team-oriented and collaborative; disciplined in adhering to Army standards and values; able to manage the operational tempo; trusting and inclusive; engaged, satisfied and possess a high level of morale; has high-quality leadership that can produce high-quality work and consistently performs well; and attends to, responds to, and creates a climate in which people are treated fairly and with dignity and respect.

0319. Determining these climate factors plays a part in how the unit contributes to the larger Army organization. The elements in this larger organizational system impact the unit climate. These elements include: mission and strategy (plan for achieving key goals); processes (standard ways of facilitating work including performance appraisal, and information systems); leadership (senior leader direction, includes perception of followers); culture (values, norms and artifacts); rewards (aligns goals with of the individual soldier with goals of the Army); external environment (Higher Headquarters conditions) and; structure (arrangement of people and functions). These elements must constantly be checked to determine how these impact the unit climate and vice-versa.

0320. One of the greatest influences on an organization's climate is the quality of its leaders. Figure 3.2 shows the positive relationship between leader effectiveness and a unit's command climate.

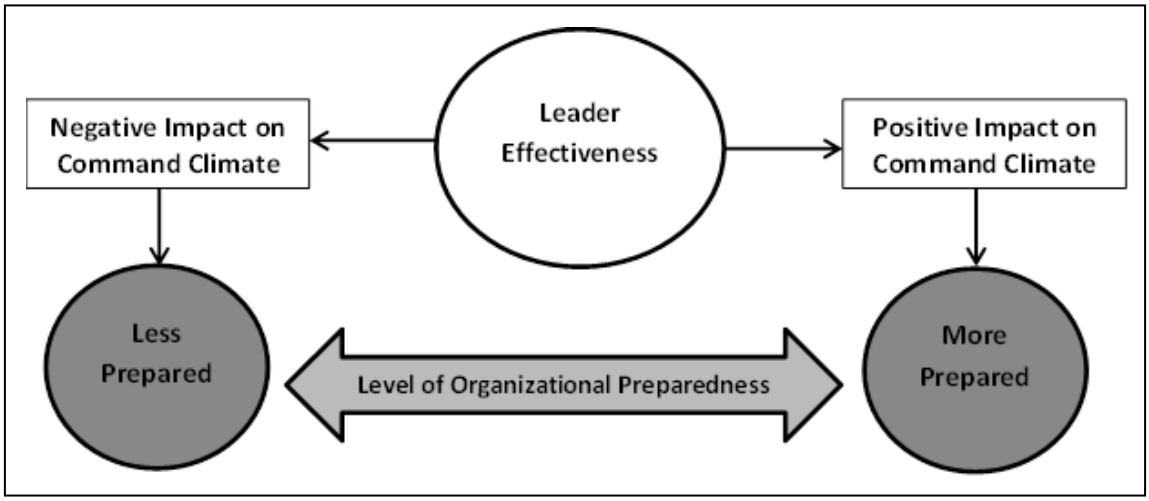

Figure 3.2 – Impacts of Leadership to Organizational Climate

0321. Army leaders and commanders promote a positive climate by inviting and advocating fair and equitable treatment and creating opportunities for all individuals. They can improve their organization's readiness by improving aspects within the organization's climate that need to be enhanced.

0322. Leader behaviors establish the organizational character through the behaviors they display and the behaviors they inspire and commend in others. These actions, in

turn, influence their members' behavior and perceptions of what is appropriate or inappropriate. These cognitions formed from observations perceptions establish organizational norms and dictate expectations that become ingrained in the organization's climate. Leaders can impact their organization's climate by modeling proper behavior, manifesting Army culture and core values, and caring for their members.

Culture and Leadership

0323. In view that the culture is an existing system within which the Army Leadership Development System operates, this section describes the socio-cultural dimension of Filipino Military Leadership. It takes into account the Army leader in addressing threats, the conglomeration of leadership styles, the general concepts that encompass Filipino leadership and the Filipino traits that have remarkable implications on one's exercise of leadership.

0324. The contemporary Filipino leader must work and collaborate with inter-agencies and communities in order to remain relevant and adaptive. The Filipino leader bears the sophistication of a modern strategic leader who is able to work around political outgrowths. He is also able to form concepts on actions to take across environments by taking advantage of natural strengths as strategic leader who inspire the Filipino people (AFPLDC, 2021).

0325. There is no single best way to lead an organization and a Filipino leader's behavior can be observed in situations necessitating the following styles: autocratic, democratic and laissez-faire. Autocratic leadership makes military units more agile and is effective for quick decision-making needs. Democratic leadership are manifested in leaders who work within their respective units and divisions and look at these as teams who make unanimous decisions. Laissez-faire leadership, on the other hand, are exhibited by those whose hands more control to the unit or team and is effective if members are competent, highly evolved, and works in cohesion, and when there are clearly defined roles and responsibilities (AFPLDC, 2021).

0326. Having set apart the Army leader, the Army Leadership Development System recognizes that a localized version of a leader as Filipino Military Leadership should be a set of personal qualities, positions, and social graces that is uniquely Filipino. This being, Thus, the ALDS accedes with the AFP LDC (2021) definition of Filipino military leadership is "the process of influencing men and women to have the same objective and vision in order to accomplish a mission" (p.70).

0327. In this following, Filipino military leadership emphasize the four core values that a Filipino military leader should possess:

a. sense of purpose that will guide leaders and subordinates in whatever mission

b. sense of altruism to empathize with others' needs

c. sense of humanity to uphold human rights

d. sense of patriotism inherent in all military leaders

0328. In view that the Philippine military has expanded its roles from warfighting and management of violence to addressing every aspect concerning morale and welfare of the Filipinos, the Army Leader is now considered a public leader (AFPLDC, 2021). As such, he has put himself in a position where a foundation of socio-cultural values and practices can help him be effective in the performance of his leadership roles.

0329. These cultural traits and practices are as follows:

a. Bayanihan – As the timeless notion of voluntary cooperation of group members, bayanihan expresses the shared leadership that the Army leader exudes. This also manifests that the chain of command participates as a functional part of a system, especially when leaders deal with different stakeholder segments with different interests and needs. This highlights the dynamic and co-creational processes between leaders, followers and environments that is contributory to organizational outcomes.

b. Laging Handa – Laging handa speaks of high readiness mindset expected of military leaders as it is required for all soldiers in order to fulfil combat and no-traditional roles. The commitment and readiness also translates to putting together competencies and culture to maximize performance and participation.

c. Pagtitiwala – Pagtitiwala is significant in the way that subordinates' willingness to be put under the control of a leader, rely on their level of trust. Trust in a leader is a measure of their willingness to follow, take risks, especially in their overall morale in combat. Similarly, the leader also develops trust on his subordinates that borders in dependability as well as group identification. Leaders must not encourage blind trust but that he must be able to develop a feeling of camaraderie through ensuring that due diligence has been done to ensure that risks have been reduced.

d. Galang – A foremost value of the Filipino culture that is also embedded in military leadership is utmost respect. As an inherent trait, leaders must understand and act in the present while being reminded of their past experiences. A leader must aspire for the affection of the troops, thereby gaining their respect and not demanding it.

e. Serbisyo – Service is the backbone of Filipino military leadership where the Army leader always inculcates that all the things we are doing are "para sa bayan" and that these are contributory to accomplishing the mission of "Serving the people, Securing the land."

0330. These Filipino traits as practiced in military leadership, of course has its pitfalls when used in the wrong context. Thus, the leader must be developed to ensure that these cultural traits will make a more cohesive unit that will work towards organizational improvement and community building.

Servant Leadership

0331. Developing leaders who possess specific servant-like attributes and competencies such as empathy and interpersonal tact, who build trust and who are good

stewards of the profession is also embedded in the Philippine Army leadership culture. Servant leaders have the ability to understand and relate to the hardships their subordinates face, thus gaining the confidence of their subordinates (Uddin,, 2019).

0332. Servant leadership is inherent in the leader-follower relationship such that these leaders are frequently described as those who prioritize their followers' personal and professional developmental needs, thus necessitating honesty and fair treatment. One of the defining behaviors and/or skills of Servant Leaders is that they listen to their followers and develop a lasting relationship with them (Uddin, 2019).

0333. The Army profession attributes servant leadership in its way of motivating Soldiers and stimulating leader development, promoting teambuilding, prioritizing the welfare of Soldiers, and improving the organization as a whole. A servant leader's role is to determine internal motivations of their Soldiers, and then supporting the Soldiers in achieving those goals (Vickery, 2016)

Primary Leader Development Methods

0334. To be able to achieve the Army leadership principles and their respective tenets, it is important to guide leaders on how to lead themselves, lead teams and other leaders and lead organizations and systems.

Leading Self

0335. Leading self means being aware of preferred leadership and getting feedback that indicates how others perceive the preferred leadership behaviour (Boe & Holth, 2015). This self-awareness also includes being able to effectively handle emotions across different scenarios, and being able to put into personal perspective the possible responses when confronted with extreme and out-of-the ordinary scenarios. While self-mastery is a continuous process, a leader must be able to determine early one how he manages himself.

0336. Part of leading the self involves identifying strengths and developmental needs that include information collection, feedback gathering and self-analysis. Information collection about self can be done through various ways such as examining formal assessments (evaluation reports) and comparing performance against a standard. This can also include formal or informal 360° evaluations. This feedback gathering can also be done through observation of how interact with the leader, especially during decision-making decisions. Feedback from peers, subordinates and superiors can help identify strengths and developmental needs that went unnoticed or may have not been acknowledged. After formal assessments, observations and accepting feedback, it is time to reflect on personal behavior and performance (FM 6-22, 2015).

Leading Teams and Leading Leaders

0337. Teams are essential components in accomplishing missions and that leaders should develop alongside their teams for this purpose. Good team leadership make the collective more effective by putting together their unique skills, experiences, and capabilities. Army leaders are charged with developing others and conducting team

building as well as other programs that contribute to unit cohesion, resilience, and agility that build creative and adaptable teams made up of life-long learners capable of exercising mission command (FM 6-22, 2015).

0338. Leading others, involve influence that encompass obtaining compliance to building a commitment to succeed. Compliance-focused influence is based primarily on authority while commitment-focused influence is based on how the leader demonstrates initiative, personal involvement, and creativity. In leading others, leaders must inspire commitment to grow and likewise fuel an individual's desire to gain a sense of control and develop self-worth. Leaders can strengthen commitment by bolstering followers' identification with his oath of service, the Army (professionalism), the unit or organization (selfless service), the leadership in a unit (respect), and to the job (duty) (University of Akron, 2014).

0339. Leaders can lead others through: Counseling where he reviews a subordinates performance and potential in relation to a set performance evaluation tool; Coaching where he guides another's development of present or developing skills and; Mentoring where he provides guidance and advice from the perspective of someone who has greater experience (University of Akron, 2014).

Leading Organizations and Leading Systems

0340. Leading organizations is characterized by having the ability to reiterate complex concepts into simpler operational and tactical plans and decisive action. This thus dictates that leading organizations means having the capability to develop plans and programs, and synchronize the appropriate systems to allow soldiers in small units to convert tactical and operational models into action. Further, leaders of organizations build teams with discipline, cohesion, trust, and proficiency (Munteanu, 2016).

0341. Strategic leaders are depicted in finely balanced fusion of high-level thinkers, and accomplished soldiers who can sustain what is necessary within current conditions. Leaders who lead from this level are change agents who forward policies that manage the human resources, technical advances and other capabilities of the Army. Each of these capabilities have systems of their own that a systems leader guides and supervises (ADP 6-22, 2019).

0342. Systems leaders understand that each of the activities that they undertake contribute and ultimately impact how the command vision is understood and ultimately achieved. The implication of their actions must clearly influence the Army culture along with effectively managing its resources that shapes and supports organizational and individual leaders. They operationalize their intents through directives, policies, programs, systems, and consensus building (ADP 6-22, 2019).

0343. Leading organizations and systems involves trust to live out and uphold Army values as manifested in decisions and actions relative to the creation of policies, programs, systems and how soldier and civilian human resource is attended to. Administration of the relationship between the Army's military and civilian leaders of is key in leading the organization and its systems. This responsibility entails a particular understanding of the role each of these leaders and their responsibilities to the entire organizational leadership. A necessary element of this relationship is the trust that exists

between civilian and military leaders leading to a collective action that is contributory to the Army's mission accomplishment.

0344. This level of leadership requires fully developed interpersonal abilities and group interaction to reach concurrence between civilian and military policy makers. Leaders move within similar characteristics and competencies and expose themselves to more complex and greater uncertainties. Leaders that lead organizations have a broader scope with longer time spans and consider greater risks and higher stakes. Thus, they have a superior need for indirect methods of influence. Thus, they have a critical role of setting examples for the organization as well as the responsibility of encouraging others to do what is right. They advocate the understanding that violations of the Army Values can negatively affect the mission and have strategic implications.

Army Officer Leadership Development

0345. The Army Officer Leadership Development is a shared responsibility of education and training, the Army organization and the individual (AFPLDC, 2021). Officers are leaders of character, competence, and capacity who lead their units, establish policies and manage their resources, while still being able to maintain morale and take care of welfare. Figure 3.3 shows the Philippine Army Officer Leadership Development that integrates collective and individual training with leader development to accomplish the Army's missions, lead the operations process, manage transitions, and cope with change (US Army, 2013).

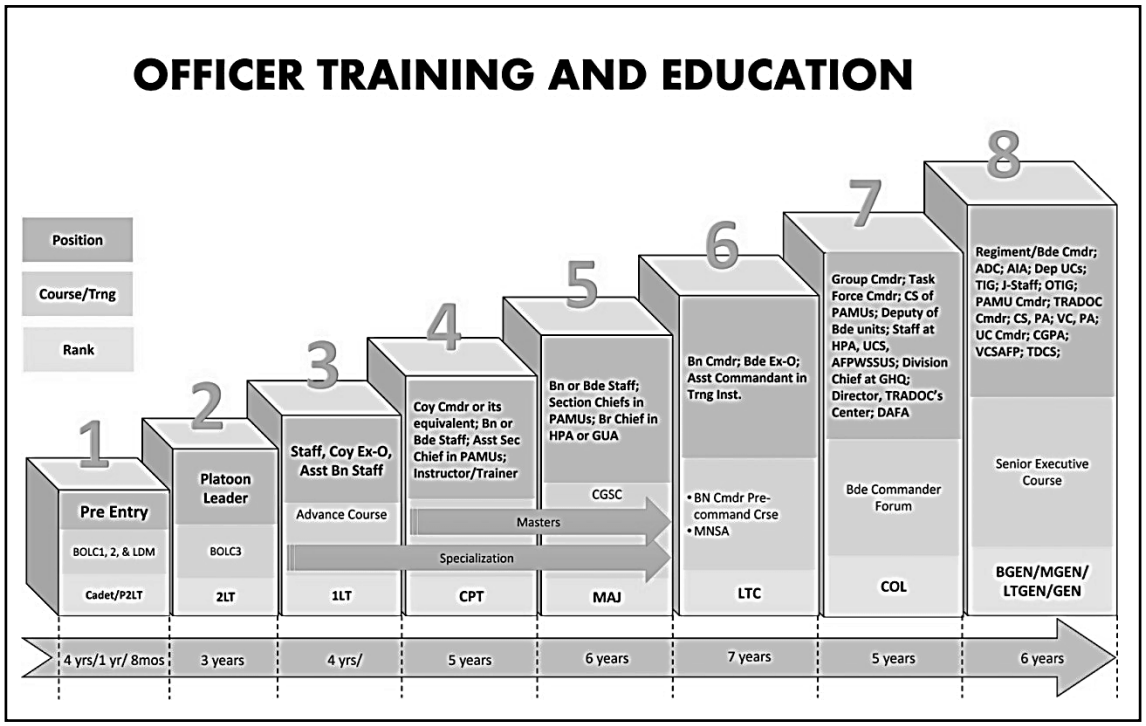

Figure 3.3 – Army Officer Ladderized Leadership Development

0346. The officer leadership development in the Army necessitates equity among education, training, and experience to develop officers who have ingrained the Army values of agility, resiliency, and being culturally apt. They are expected to be able to

design, plan, and execute in both peace and war situations. Leader development starts in pre-commissioning (Cadet/P2LT) and is continuous throughout a career.

0347. As the officer leader progresses, excellent performers are identified and provided with more opportunities to expand their perspectives through similarly broad array of assignments. These opportunities are internal and external to the Army, and may be provided throughout an officer's career. The experiences and education in different organizational cultures and environments result to leaders who can flourish at the tactical, operational, and strategic levels.

Army Non-Commissioned Officer Leadership Development

0348. Army Non-Commissioned Officers (NCOs) are accountable for setting and maintaining high-quality standards and discipline manifested in daily missions and decisions. They are dedicated to the Army Values and are stewards and role models in terms of training, educating, and developing subordinates. NCOs are likewise responsible for the welfare of soldiers. Figure 3.4 depicts the roles that NCOs have as small unit leaders, trainers, mentors, communicators, and advisors. As such, their development is achieved through a progressive sequence of local and Army-level education, unit and individual training, and assignments of increasing scope and responsibility.

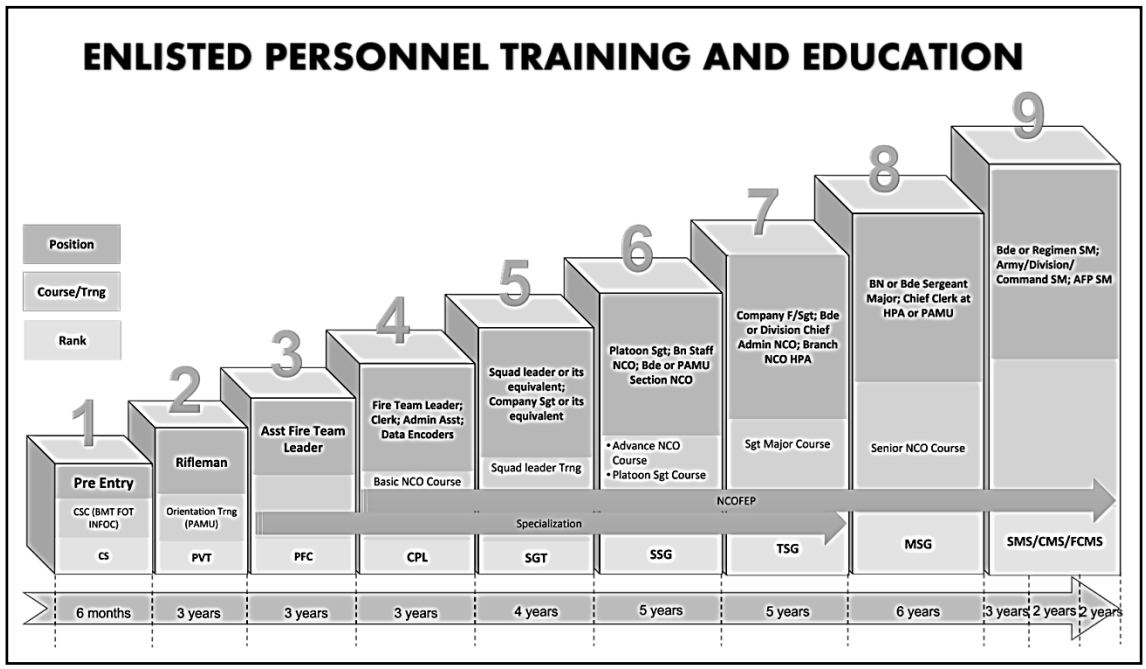

Figure 3.4 – Army NCO Ladderized Leadership Development

0349. As an NCO occupies staff positions, they are tasked to effectively support execution of warfighting functions and are expected to be adept in engaging aspects of the mission command system. Considered at this time as experienced and expert soldiers, they contribute to the development of junior officers. NCOs build professional and personal rapport with officers based on mutual trust and common goals. They serve as the essential link between the officer corps and the enlisted personnel. Senior NCOs advise commanders and serve as significant sources of knowledge and discipline for all enlisted matters. Soldiers look to their NCOs for solutions, guidance, inspiration, and

development as they have undergone and will undergo similar ranks and NCO education.

Civilian Human Resource Leader Development

0350. Like their uniformed counterparts, Army Civilians are leaders of competence, character, and capability as they serve at all levels, lead staff and programs, establish policy, and manages resources, transitions and change. The Civilian Human Resource (CHR) provides institutional memory that complements the rotation mandates of the uniformed Army that thus make them an intrinsic part of the military team. The Army CHR has been recognized to provide mission-essential capability, organizational acumen, and leadership and are likewise expected to understand and practice mission command philosophy (US Army, 2013).

0351. As civil servants under oath, the CHR is committed to serving the public and Army values in the performance of their duties. They are expected to produce high-quality outputs in their application of technical knowledge and management of human, financial, and information resources. They should be collaborative and innovative at solving unsatisfactorily constructed problems and should be comfortable functioning in complex environments.

0352. Thus, in accordance with existing provisions under the Civil Service Commission, CHR leader development is to be achieved through the integration of training, education and experience. Career program directed training events provide Army Civilians with technical and functional expertise. The development of Army Civilian leaders warrants appreciation and dedication for nourishing, developing, and expanding scope and leadership prospects.

0353. As such, the Army commits to improve civilian leader development programs through developmental transitions aimed at creating knowledgeable CHR leaders who can innovate and create conditions. The Army's CHR leader development programs must incorporate the knowledge and ideas for the good of the organization to develop new products, processes, and systems to ensure success in an uncertain and complex environment. Shifting to competency based merit system of the civilian workforce will help determine, certify, and integrate individual and organizational needs.

Chapter IV
Core Leader Development Programs

0401. Leadership development programs are investments towards an individual's internal growth, developing character, competence and capability. As the Army leader development is a deliberate, continuous, sequential, and progressive process grounded in Army values, leadership programs must involve recruiting, accessing, developing, and promoting soldiers while challenging them with greater responsibility. This chapter focuses on the programs and its implementers to achieve the envisioned Army leader.

Army Leadership Development Center

0402. The Army Leadership Development Center (ALDEC), activated on 15 April 2016 and consequently assigned as one of the centers of the Training and Doctrines Command, PA (TRADOC, PA), was made to address the lack of focus on the leader's development program. The center's primary mission is to design leadership concepts and facilitate leader development programs in order to develop professional and effective Army Leaders.

0403. The ALDEC is responsible for developing leadership concepts, programs and curricula, and conducting researches, seminars, symposiums and forums on Army leadership. It has the capability to train, develop and evaluate competencies of Army leaders and formulates policies on Army leadership development.

0404. The Center's organization is composed of its Executive, Leadership Curriculum Development, Leadership Development, and Leadership Development Evaluation Divisions including two schools which are the Army Officers Leadership School (AOLS) and the Army Non-Commissioned Officers Leadership School (ANCOLS) (Figure 4.1)

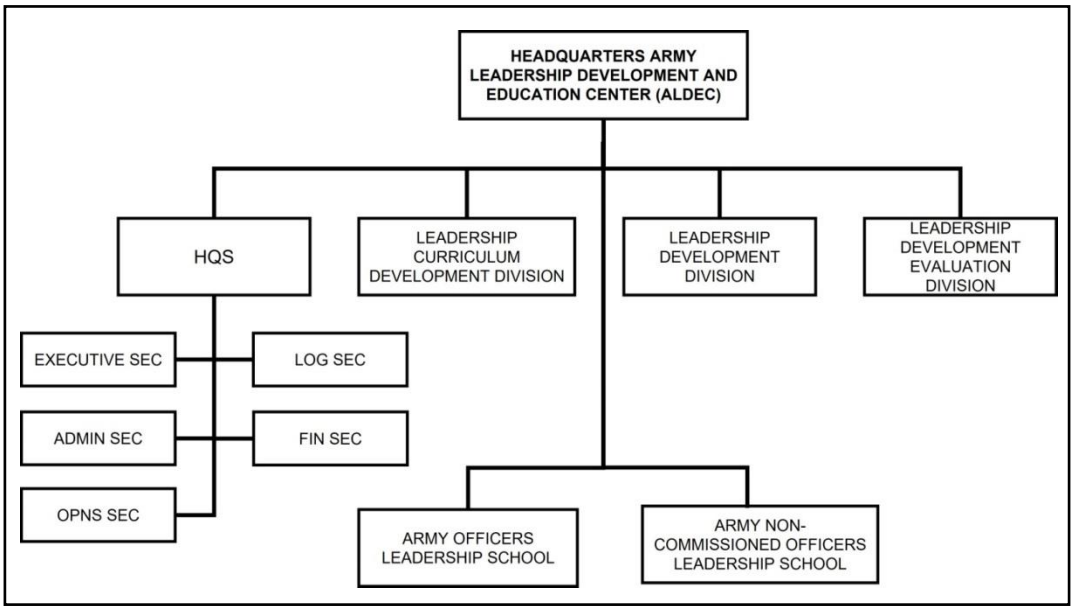

Figure 4.1 – ALDEC Task Organization

0405. As a school, the AOLS (Figure 4.2) is tasked to train and educate Army officers on military command, leadership and management. Thus, it conducts leadership and management trainings and special courses for Army Officers. Likewise, the AOLS provides leadership experts and related training support to other Army units. To further enrich its capabilities, the AOLS also cross-trains with military schools and other training institutions.

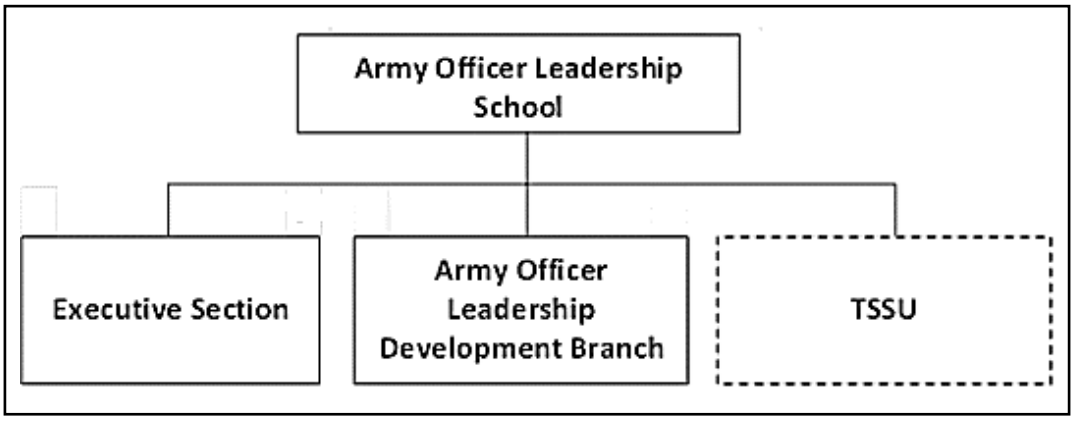

Figure 4.2 – AOLS Task Organization

0406. The ANCOLS (Figure 4.3) mission is to train and educate Army non-commissioned officers on military command, leadership and management. Thus, they conduct leadership, management trainings and special courses for the Army NCO. Likewise, they also train with military schools and other training institutions.

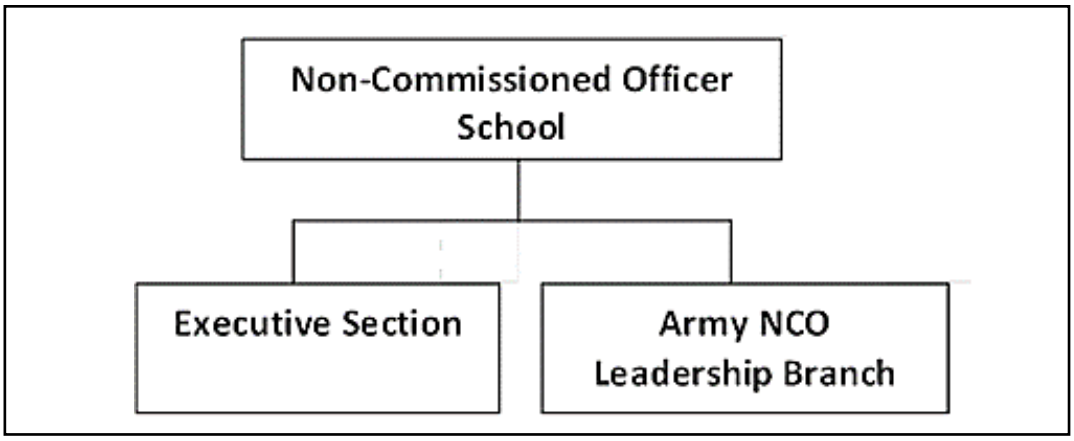

Figure 4.3 – ANCOLS Task Organization

Character and Leader Development Program

0407. Character and leader development programs are being undertaken for key leadership positions that enlisted personnel and officers are currently occupying.

0408. To further educate Platoon Leaders, a leader development program is geared towards enhancing the combat effectiveness of their respective platoons focusing on leadership development and re-familiarization on combat and enemy TTPs peculiar in the AOR. Specifically, the PLCPS provides a venue for the platoon leaders to share experiences and review and asses combat performances that will ultimately contribute to furthering their knowledge on combat leadership and enemy TTPs peculiar in their

respective AOR. The symposium is also an opportunity to cascade Division and Brigade campaign plans, pertinent operational directives, operational guidelines and the current threat situations. Similarly, it is also an assessment method to determine whether the basic/ fundamental doctrines acquired and learned during pre-deployment training have been properly applied and executed.

0409. To further educate the Company Commanders on leadership development as well as further enhance their tactical competence with broadened situational awareness in their respective areas of operations, symposiums and other leadership programs are installed. Specifically, the workshop/symposium aims to further instill among the company commanders a better understanding of their respective operational environment and the responsiveness to address combat uncertainties. Through discussion and knowledge sharing, the symposium aims at enhancing leadership skills on both operations and administration and at updating the company commanders on the operational guidelines, thrusts, directives and plans of their respective Divisions and Brigades.

0410. A program is offered to leaders programmed to occupy battalion commander positions. This is provided to leaders to further enhance the knowledge, skills and attributes of the participants as part of their continuous leadership development. Specifically the course examines how leaders apply core leader competencies at the tactical level and consequently improve on the exercise of Mission Command. Leaders are also provided competencies on Operational Planning in conceptualizing the combined arms operations and on managing unit resources.

0411. To further strengthen the leadership acumen coupled with further enhancing situational awareness among the Battalion Commanders, symposia and other programs, are conducted. The program covers mission accomplishment in support of other services of the AFP in order to accomplish the AFP's Mission. In the symposium, the following topics and issues are discussed: current operational environment within the Unified Command's (UCs) AOR; experiences, concepts, and strategies to deliver good operational results; interoperability with PNP and other AFP major services, and; local convergence initiatives with LGUs, NGAs and other significant stakeholders.

0412. A forum for brigade commanders is conducted to provide the venue using an online platform to the participating Brigade/Regiment/Task Force Commanders for sharing and reflecting on valuable information and experiences and adopt innovative strategies with the use of campaign tools while further enhancing communication, coordination and collaboration for mission accomplishment. Specifically, the forum aims to further enhance the capabilities of the participants in the performance of tasks to attain operational objectives through idea, experience and concept-sharing particularly on operational environments and current and emerging strategic programs to the operational areas and local convergence initiatives.

0413. For incoming or current squad leader of the infantry battalion, a training is conducted with the aims of providing competencies for NCO leaders at the squad level and likewise build these competencies on their individual needs. Its leadership module imparts squad leader core competencies and counseling and mentoring among others.

0414. For incoming or current platoon sergeants of the infantry battalion, training is conducted to equip NCO leaders. The training includes building up competencies to fulfill their responsibilities, they are also expected to gain or enhance their managerial skills at the platoon level. Its leadership module includes an application of the systematic process of critical thinking, problem solving, and decision-making with the use of the different tools of analysis.

0415. Leadership training are likewise conducted for the incoming or current first sergeants of the company. At this level, NCO leaders are expected to be aware of existing AFP and PA policies that will aid them in displaying effective leadership traits corresponding to their positions. They are also given competencies to be efficient role players in their unit's operations and administration. At the heart of its leadership module is providing a knowledge base on after action reviews and knowing how to build cohesive company teams through team building activities.

0416. As part of leadership development, mentoring programs are to be conducted vis-à-vis all forms of training. In view that most of the existing mentoring programs are in voluntary developmental relationships, Army leaders must be imbibed with a sense of responsibility to mentor all of their direct subordinates. Mentoring programs should have an overarching goal of leaving a legacy that underscores equal opportunity and diversity.

0417. Mentoring programs initiate the mentoring relationship through a mentorship agreement stating terms for the relationship and an individual development action plan. These are used to set goals for the mentee's development and to provide a way for the mentor to assess the mentees current level of professional competence.

Military and Professional Development Program

0418. The military and professional development programs are courses that provide for baseline competencies necessary for Army officers and NCOs to ensure that they are fully equipped for the next higher position for which they are programmed for.

0419. Pre-entry courses are designed to equip new entrants with basic soldiery skills. For officers, this comes in the form of the Basic Officer Leader Course (BOLC) 1&2 while for candidate soldiers, the pre-entry course is the Basic Military Training (BMT) succeeded by a follow-on-training depending on the specialization of the unit where the new soldiers belong.

0420. The basic courses for both officers and NCOs are AFPOS-dependent. This provides an introduction on their specialized function. For the officers, the basic course or specialization phase is termed as BOLC 3.

0421. The advance courses for both officers and NCOs are AFPOS-dependent and must likewise follow the specialized training obtained during the basic course.

0422. The Command and General Staff Course (CGSC) of the Armed Forces of Philippines Education, Training and Doctrine Command (AFPETDC) is open to AFP officers with potential for higher command and staff responsibilities as determined

through its stringent screening processes. At the end of the course, leaders are expected to be fit to command, capable to plan and qualified to advise.

0423. The Master in National Security Administration (MNSA) is the flagship program of the National Defense College of the Philippines (NDCP) open to both civilians and military personnel. The program aims to develop the competencies, values, and skills of key officials and national security leaders in the formulation and implementation of policies related to national security and development. As such, nominees are selected in their capacities as future national security leaders.

Program Integration

0424. The Combat Leadership Enhancement Programs (CLEP) are an individual-focused training process designed to develop leadership skills in a variety of training environments. It is composed of the programs for: brigade commanders; current and incoming battalion commanders; current and incoming company commanders; incoming platoon leaders and; senior NCOs.

0425. The CLEP is considered a venue for developing leader competencies, whose modules are focused on enhancing situational awareness necessary for different levels of leadership. These symposia, although largely knowledge-based, are also geared toward developing and enhancing leadership skills based on shared experiences. Bringing together experiences from various fields of operations and occupational specialties, army leaders gather in one venue to share success stories and determine best practices that can be adapted in similar areas of operation.

0426. With the CLEP learning framework anchored on Kolb's Theory on Experiential Learning Cycle, the program adapts the Share-Reflect-Develop-Apply stages. From the shared experiences, best practices, lessons learned and strategies, participants are asked to reflect on these and eventually develop awareness, new strategies and/or courses of action. When leaders go back to their AOR after undergoing their corresponding programs, they are expected to test these actions and evaluate results accordingly.

0427. Keeping in mind that the operational environment is evolving and that the organization is doing its best to manage the challenges that come with these changes, developing appropriate leadership competencies is a must. Education and training as a foremost organizational capability is also an able arm in capacitating Army officers with the know-how that they need. While focusing on not only mission accomplishment and welfare of troops, the CLEP embodies the development of a true Army professional. These leaders are founded on being responsive to shifting operational foci, thus being effective leaders of the capable ground force that the Army envisions itself to be.

Chapter V
Leadership Development Support & Sustainability

0501. To ensure the continuity of the leadership development system and its programs, it is important to support the learning and development of new strategic leadership capabilities within the organization as well as new instrumental and task-oriented ones. Likewise, it is important to transfer instrumental and task execution capabilities to be able to sustain the leadership initiatives. This chapter provides for the sustainability concepts to support Army Leadership Development System.

Senior Leader Buy-In

0502. Leadership is an important capability in the organization, especially in the sustaining programs. Thus, it is ideal to put leaders in the organization through some version of the program to increase their awareness and appreciation and they can likewise model the desired behaviors (Hopke 2017; Hopke, 2019).

0503. This buy-in involves gaining leadership support (at all levels) to develop crucial staff. This can be made possible when leaders emplace development plans and allot ample resources for the system and its programs. Similarly, this will encourage employees to teach others and make decisions for themselves, as they endeavour to embody the values of leadership. Further, in order for leadership development to be universal across the organization, there must be clear responsibilities and goals set around the development of others. As such, coming up with key performance indicators for each of the members of the unit or the organization results to a learning and development-focused organization, modeled from the top with cascading accountability throughout your teams (Council, 2019).

0504. Leadership for sustainability necessitates extraordinary abilities possessed by leaders. This follows that as influential members of the organization, leaders are needed to read into and predict through complex problems, encourage emotional intelligence development and adaptively engage groups to effect adaptive organizational change (Bendell, 2015).

0505. To develop sustainability leadership understanding of how to develop groups that respect leaders, senior role holders must act as hosts and enable leadership to emerge from within the group. This orientation is termed as “group literacy” that arises from a desire to improve the group to better serve their purpose, understanding why they do not succeed and creating interventions to address their identified gaps (Bendell, 2015).

Keeping Leaders Engaged

0506. It is important to maintain a monitoring system for leaders not only during the program but in-between programs as well. Knowing and meeting leader expectations affect the impact of the program and how they will translate their gains into actions. Monitoring systems will not only keep the leaders engaged but it will make the systems and the programs relevant.

0507. Engagement translates to commitment. At the end of programs, leaders should commit to changes such as working with peers, a written commitment or their own command or leadership philosophy. The system endeavors to create a safe environment for peers to support each other in these behavior changes within and beyond the conduct of the program.

0508. In important that leaders have extensive knowledge of their organization and commit to its goals. Through modelling, subordinate leaders also experience leadership and enable them envision themselves as leaders. This then translates to ownership of leadership qualities and personal pride that will be demonstrated in their organizations.

0509. With leaders as stakeholders of the leadership development system and its programs, their experiences must be gathered in order to sustain their development. This is built on the symbiosis of the system, the community and its stakeholder that emphasizes a direct positive relationship between the improvement both of human and social capital together and natural capital. Sustainable leaders incorporate human and social well-being with consideration for the natural environment (Peterlin, 2016). Further, sustainable leadership is characterized with the intent to effect improvement of groups to achieve significant environmental or social outcomes (Bendell, 2015).

Use Reality Based Scenarios

0510. In order to make leadership sustainable, all of its aspects have to be relevant. As such, materials, ideas and content forwarded in programs must be based on actual and real-life operations. Leadership should be coupled with sustainability practice as this will be increase sufficiency and substantiate leadership ideas that are part of the system (Bendell, 2015).

0511. Sustainable leadership development is demonstrated through knowledge, skills and performance as attributed to how leaders put meaning into their everyday experiences. The most effective sustainable leadership development is manifested in individuals who are actively involved in accomplishing the mission and those who take part in creating goals for their development rather than simply wanting knowledge and skills without being involved in the entire developmental process (Peterlin, 2016). This can only take place when real-life situations are used as baseline.

Social Integration

0512. Sustainability in leadership should actively seek innovative approaches in collaboration with stakeholders, thus demonstrating social responsibility. This support structure builds connectivity, making it easier for leaders within and outside the

organization to connect with each other toward the realization of common goals. Relatedly, a sustainable social marketing of this collaboration should also be part of sustaining leadership development (Peterlin, 2016).

0513. Sustainable leadership development efforts stems from social awareness through a process of developing, furthering, and communicating the initiative, and rewarding individual actions responsible for such. Through constant interaction with stakeholders that emanates from observation, identification, and demonstration of commonly-shared values, various leadership roles are performed. Sustainable leadership development incorporates personal experiences with social behavioral components, and feedback component of all activities during and outside the system programs (Peterlin, 2016).

Glossary

360º Feedback
A tool for giving leaders clear feedback from their subordinates, peers and, superiors made to create a strong motivation and specific focus to improve skills and performance.

Be-Know-Do
An Army leadership model where *be* stands for character, know stands for knowledge and skill sets and *do* stands for action.

Buy-in
Agreement to support a decision.

Capacity
Broad-based, skillful participation in the work of leadership that leads to lasting organizational improvement.

Character
Distinct mental and moral qualities developed in a leader.

Command climate
The culture of a unit that states how the unit or organization operates, largely influenced by commanders at all levels.

Competence
The ability to exercise leadership successfully and efficiently

Culture
The customs, arts, social institutions, and achievements of a particular group of people that can be adapted by the rest of the Army.

Education
The process of receiving or giving systematic instruction from a military training institution or school.

Ends-Ways-Means
A strategy that forces assumptions about an adversary and, whatever those assumptions are, an adversary will try to defy them.

Ethical climate
A set of shared perceptions of procedures and policies, both codified and informal, which shape expectations for ethical behavior within an organization.

Experience
A practical/actual contact with and observation of facts or events; Events that took place in actual operations.

Individual competency
The capacity of individuals/employees to act in a wide variety of situations inclusive of their education, skills, experience, energy and their attitudes that will make or break the relationships with the stakeholders.

Institutional domain
These are all the learning activities that the Army directs and mandates its personnel, inclusive of conducting training and attending educational courses (both military and civilian).

Intra-personal
A type of intelligence that is associated with one who has a mastery of what is taking place within one person's self or mind.

Leader development
Any training, education, or development activity undertaken for the purpose of enhancing one's leadership effectiveness.

Leadership development program
An official commitment to help personnel not only grow their skill sets but also help them find new roles within the organization to exercise their skills with a long-term influence.

Leader development strategy
The process of researching and identifying leadership strategic options, selecting the most promising and deciding how leader resources will be developed and utilized across the organization to achieve objectives.

Leadership development
The process which helps expand the capacity of individuals to perform in leadership roles within organizations.

Organizational competency
Core competencies defining what the organization does best and how it expects that to be accomplished.

Organizational intelligence
The capacity of an organization to create knowledge and use it to strategically adapt to its environment.

Operational domain
The collection of functions responsible for the provisioning, management, monitoring and optimization of the systems in the control domain.

Operational environment
Areas such as land, sea, air, space, and cyber networks where the military operates that also include any adversaries, allies, neutrals, systems, and subsystems.

Performance Governance System
A localized (Philippine version) performance management and measurement tool of the Balanced Scorecard developed at the Harvard Business School.

Philippine Army Operating Concept
A document that describes the characteristics of the Army's proposed system from the viewpoint of the organization as a major branch of service

Self-development domain
Allows leaders to develop themselves to address their specific personal developmental needs and situational requirements.

Strategy
A plan of action or policy designed to achieve a major or overall leadership goals and aims.

Strategic environment
The broad range of strategic factors that influence the commander's understanding of its operational environment.

Strategy management system
A cycle that integrates the planning and execution of a strategy.

System
A set of components working together as parts of the organization or mechanisms that are interconnected.

Training
A means to develop and improve a mental or physical faculty through instruction or practice.

Abbreviation and Acronym List

ACES	Analytical, Conceptual, Emotional, Spiritual
ADP	Army Doctrine Publication
ALDEC	Army Leadership Development Center
AFP	Armed Forces of the Philippines
AFPETDC	AFP Education, Training & Doctrine Command
AFPLDC	AFP Leadership Development Center
AFPOS	AFP Occupational Specialty
ANCOLS	Army Non-Commissioned Officers Leadership School
AOLS	Army Officers Leadership School
AOR	Area of Responsibility
BOLC	Basic Officer Leader Course
BMT	Basic Military Training
CGSC	Command and General Staff Course
CHR	Civilian Human Resource
CLEP	Combat Leadership Enhancement Program
FM	Field Manual
LDS	Leadership Development System
MNSA	Master in National Security Administration
NCO	Non-Commissioned Officer
NDCP	National Defense College of the Philippines
P2LT	Probationary 2nd Lieutenant
PA	Philippine Army
PAMTCDOP	Philippine Army Medium-Term Capability Development Objectives & Priorities
TRADOC	Training and Doctrines Command
TTP	Tactics, Techniques & Procedures
VUCA	Volatility, Uncertainty, Complexity, Ambiguity
WGU	Western Governor's University
